

Standard Operating Procedure

OH-222 DETERMINATION OF TECHNICAL CONTENT FOR PRODUCT LABELING

Document Owner:	Amanda Thornton	
Owning Function/Organization:	North America – Research & Development - MPD, P&F	
Applicable Business: ☐ Oral Care (Brush) ☐ Oral Care (Formulated) ☒ Personal Health Care Shareable with EBPs? ☒ Yes ☐ No	Applicable Region: ☐ Asia Middle East Africa ☐ Europe ☐ Greater China ☐ Latin America ☒ North America	Applicable Product Category: ☒ Cosmetics ☒ Dietary Supplements ☒ Food Supplements ☒ Household Products ☒ Medical Devices ☒ Medicinal Products/Drugs ☒ Natural Health Products ☐ Other (see scope)

PURPOSE

The purpose of this standard operating procedure (SOP) is as follows:

1. Define the work process and functional responsibilities for generating regulated content on product labels intended for commercial distribution within the North American market.
2. Deliver a documented work product which serves as the technical basis for supporting labelling decisions for product labels.

SCOPE

This Standard Operating Procedure (SOP) applies to all products classified as Dietary Supplements, Natural Health Products (NHPs), Foods, Drugs, Consumer Goods, Medical Devices, and Cosmetics in the North American Personal Health Care business. Products distributed into the United States (US) and Canada (CA) are in scope regardless of the region of manufacture or packing. This SOP is limited to the collection of data inherent to the formulation which is required to label products according to local regulatory requirements. Examples of this non-discretionary data include serving information, ingredient listings, dosing information, cation content, etc.

It does NOT apply to:

- Product classifications outside of those listed in the above scope.
- Finished Products distributed outside of the North American region. However, this procedure may be used as a guide for other regions.
- Content on labels that are not inherent to the formulation. Examples of this data include product name, product claims, certifications, net weight, manufacturer details, usage instructions, etc.

Applicable regulations for the requirements for product labelling are included within the table below.

Standard Operating Procedure

OH-222 DETERMINATION OF TECHNICAL CONTENT FOR PRODUCT LABELING

Table 1: Applicable North America Regulations by Product Classification

Product Category	US Regulation	CA Regulation
Dietary Supplement, NHPs, & Foods	21 CFR Part 101 US Department of Agriculture: The National Bioengineered Food Disclosure Standard (Public Law 114-216)	Natural Health Products Registrations Sections 86-98, Food and Drug Regulations Sections A & B
Drugs	21 CFR Part 201	Food and Drug Regulations Section A.01.014 - A.01.017, A.01.060.1-A.01.065, C.01.003 - C.01.012, C.01.021 - C.01.035
Cosmetics	21 CFR Part 701	Cosmetic Regulations Section 17-28
Medical Devices	21 CFR Part 801	Medical Devices Regulations Section 21
Consumer Goods	FHSA (warnings), all other content follows Cosmetics (above)	Consumer Packaging and Labelling Act Regulations

RESPONSIBILITIES

Process & Formulation / Material, Process, & Delivery

- Obtains technical data and/or relevant documentation required for product labelling.
- Consults with other functions for required inputs.
- Documents and gains approval of technical data (documented work product) required for product labelling.
- Reviews and, as needed, updates technical data during product lifecycle management.
- Inputs label content into artwork system based on data gathered from this work process.

Products Research

- Contributes relevant technical inputs related to dietary or active ingredients, dependent on product category.
- Aligns with safety and regulatory on level and dosing of dietary or active ingredients.

Measurement Science (Analytical & Microbiology)

- Identifies a suitable method when product needs to be measured to determine technical data.
- Executes or coordinates product testing needs.

Regulatory

- Defines technical product and/or ingredient data required for labeling per regional requirement.
- Owns the final decision on the appropriate rounding of cations, supplement and nutrition facts, and owns the decision on whether certain ingredients or cations are labeled.
- Responsible for ensuring compliant formatting including capitalization, italics, and footnote symbols.
- Owns final determination of the appropriate nomenclature (e.g., USAN) naming for each ingredient.
- Approves technical content for product labels in the artwork system.

Safety

- Determines safety warning and/or allergen statements using data provided

P&F / Material, Process, & Delivery Band 3 (or delegate)

- Review and approve the documented work product for conformance to this procedure.

Standard Operating Procedure

OH-222 DETERMINATION OF TECHNICAL CONTENT FOR PRODUCT LABELING

PROCEDURE

1. The local regulatory and safety functions are responsible for identifying regional labelling requirements for the product category (dietary supplements, drugs, foods, etc.). A template for each product category type within scope of this SOP for North America is provided within this procedure. However, these templates should be reviewed against current labelling considerations and updated, as needed.
2. Following the identification of required technical inputs, the P&F / MPD function is responsible for collating relevant data from technical functions to support the product labelling exercise.
 - 2.1. Inputs which can be determined analytically (i.e., nutrient content data, cation content) may also be technically assessed provided there is sufficient scientific basis to do so.
 - 2.1.1. All Product Classifications: Technical Assessments may be conducted using raw material nutrition and composition data.
 - 2.1.2. Dietary Supplements, Foods, and Natural Health Products: Technical Assessments may be conducted using comparator formulations provided the comparator has testing data or a previously approved assessment. In these instances, follow the framework described in the attached "Theoretical Determination of Dietary Supplements, Foods and Natural Health Products Technical Content".
 - 2.2. Inputs related to serving size and/or label claims of dietary or active ingredients are provided to P&F / MPD by the Products Research function.
 - 2.3. Inputs which typically do not require testing (i.e., ingredient listing) are provided by review of raw material and/or formula data. It is recommended this data is obtained from Regulatory via formula data stored in relevant digital systems (i.e., Ingredient List Report in PASS) that is reviewed by regulatory and safety functions. However, this data may also be provided within the provided template. If the product is externally manufactured, input may be received by the contract manufacturing organization. The vendor must be appropriately assessed and demonstrate they hold the technical expertise to provide accurate data.
3. Once all data is collated, the summary is approved by a P&F or MPD Band 3 (or delegate).
4. The approved template is then used to conduct product labelling.
5. The summary is reviewed during relevant change management activities. P&F/MPD and GPS determine if the summary requires an update based on the scope of the in-market change.
 - 5.1. Relevant change management activities typically include product dosing changes, product composition changes, finished product specification changes, alternate raw material supplies with different compositions, alternate raw material supplies with different allergen potential, and/or regulation changes which impact required technical inputs.
 - 5.2. Irrelevant activities typically include processing changes, raw material specification changes, alternate raw material supplies of identical composition, and/or alternate raw material supplied with same allergen potential.
6. The summary is stored within the Enovia Innovation Record Management (IRM) system with the related formulation part (FOP) standard.

Standard Operating Procedure

OH-222 DETERMINATION OF TECHNICAL CONTENT FOR PRODUCT LABELING

DEFINITIONS & ABBREVIATIONS

SOP	Standard Operating Procedure
IRM	Innovation Record Management – Enovia application
FOP	Formulation Part – Enovia Digital Specification Management type
P&F	Process & Formulation
CFR	Code of Federal Regulations
MPD	Materials, Process, & Delivery
NHP	Natural Health Product
CMO	Contract Manufacturing Organization
GPS	Global Product Stewardship
Dietary Ingredients	Those ingredients which are added to the finished product intentionally for dietary fortification, claims support, or other performance need. For example, a dietary ingredient can be a vitamin, mineral, herb, or other botanical, amino acid, and substance such as enzymes, organ tissue, glandular, and metabolites; or extract or concentrates of them
Component	Any ingredient intended for use in the manufacture of a drug product, including those that may not appear in the final product (i.e., processing aids).
Active Ingredient	Any component present in the formula that promotes pharmacological activity or other direct effect in the diagnosis, cure, mitigation, treatment, or prevention of disease, or to affect the structure or any function of the body.
Inactive Ingredient	Any component of the formula that is not an active ingredient.

VERSION HISTORY (Last 3 Versions)

Version	Version Description
3	- Expanded the SOP scope to include drug, cosmetic, medical device and consumer good categories. - Added two additional attachments titled “TECHNICAL INPUTS FOR DRUG PRODUCT LABELS (US, CA)” and “TECHNICAL INPUTS FOR COSMETIC, MEDICAL DEVICE, AND CONSUMER GOOD PRODUCT LABELS (US, CA)” to demonstrate this procedure for the added product categories. - Added Table 1: Applicable North America Regulations by Product Classification and Figure 1. Flow Diagram of Technical Information Labeled by Product Category - Removed Quality function as approver for attachments. Quality is being removed as R&D and Regulatory own technical inputs for product labelling. Regulatory will approve required inputs.
2	- Expanded the SOP to reflect a general procedure that can be leveraged to guide technical inputs into food and supplement labels. - Included the original assessment framework from OH-222 REV 1 as a work process that can be followed for determining nutrient content data. - Included North American specific template for the demonstration of this procedure.
